

InVite™

kil zone

Attractant for House, Stable and Blow Flies

Directions for Use

To create a “kil zone” surface, test first to insure that no surface marking occurs, then shake well and spray the surface until just damp with InVite Kil Zone. Follow by spraying the surface with micro-cap residual insecticide (eg. pyrethroid) applied according to the label. Flies will be attracted to the surface by the InVite Kil Zone and will land and pick up the residual and die. For trapping, put about 4 oz of InVite Kil Zone in a bottle or hanging cup trap and add water and/or food. Traps may be used anywhere appropriate.

Keep out of reach of children. May be harmful if swallowed - seek medical attention. Give one glass of water and do not induce vomiting. Wash hands after use. If in eyes, remove contacts and flush with water for 15 minutes. Seek medical attention for persistent irritation. Store in a closed, appropriately labeled container between 40 and 90 °F.
